K2PL - NEW GENERATION TANK

Product description

Dozens of Polish companies, scientific and research and development institutes as well as academic centers have already started preparations to participate in the largest armored undertaking in Poland for over 30 years, whose leader is H.CEGIELSKI-POZNAŃ S.A. with a Korean partner, HYUNDAI ROTEM COMPANY.

K2 PL WILK is a tank based on the first tank of the new digitized era - K2 Black Panther, produced by the HYUNDAI ROTEM COMPANY company.

Technology transfer from a Korean partner and a polonized construction mean an integrated logistics support system, a secure supply chain of parts and components and ammunition. What distinguishes the K2 PL WILK tank on the market is certainly the best weight to power ratio, optimal passive-active protection, hydropneumatic support for the ability to overcome terrain and precision of fire.

Developed in South Korea, the K2 Black Panther is a 55-ton vehicle that is equipped with a 120mm smooth-barrel gun and two 12.7mm and 7.62mm machine guns. K2 is a tracked vehicle with world-class mobility, with very high firepower and very high survivability on the battlefield through the latest technical and engineering solutions implemented in it.

H.CEGIELSKI-POZNAŃ S.A. together with HYUNDAI ROTEM COMPANY, they plan to transfer technology and produce a polonized version of the tank with the forces of the Polish and Korean industries. The product created as part of the cooperation will be a vehicle adapted to European conditions.
